

SHRAVAN UTTAM KADAM

Full Stack Developer

+91 8483937455 | Nashik, Maharashtra | Shravankadam372@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Full-stack developer with hands-on experience building production-ready, AI-integrated web applications using the MERN stack. Currently building KrishiGo, a role-based agri-equipment rental marketplace serving rural Maharashtra, covering payments, payouts, and dispute resolution end-to-end. Skilled in REST API design, JWT/OAuth authentication, and role-based access control. Seeking a full-stack or backend-focused role to contribute to scalable product development.

EDUCATION

Bachelor of Engineering (B.E.), Information Technology Expected May 2028

MET League of Colleges (Mumbai Educational Trust) | CGPA: 8.4/10

Higher Secondary Certificate (HSC / 12th Science) Jun 2022 – Mar 2024

Gokhale Education Society's H.A.L. College of Science, Nashik

SKILLS

Languages: C++, Java, JavaScript

Web Technologies: React.js, Tailwind CSS, Node.js, Express.js

Databases: MongoDB, PostgreSQL, MySQL

Tools & Platforms: Git, GitHub, Postman, Razorpay, Cloudinary, Vercel, Render

CSE Fundamentals: Data Structures & Algorithms, OOP, OS, RDBMS, Computer Networks, System Design Basics

Soft Skills: Problem Solving, Agile Development, Independent Work, Team Collaboration, Adaptability

PROJECTS

KRISHIGO — Agri-Equipment Rental Marketplace | [GitHub](#) | [Live](#) *React, Node.js, Express.js, MongoDB, Razorpay, Cloudinary*

- Built a full-stack rental marketplace connecting farmers and equipment owners across rural Maharashtra, with dedicated Farmer, Owner, and Admin dashboards under a 3-tier RBAC middleware system.
- Integrated Razorpay for payments and designed a commission, penalty, and payout calculation engine, along with OTP verification and a dispute-resolution workflow for booking conflicts.
- Implemented Cloudinary/Multer-based media handling and a bilingual (English/Marathi) UI using i18n, making the platform accessible to non-English-speaking rural users.
- Architected Mongoose schemas across Users, Bookings, Equipment, Payouts, and Disputes to support a scalable multi-role transaction system.

AI-POWERED E-COMMERCE PLATFORM | [GitHub](#) | [Live](#) *React.js, Node.js, Express.js, MongoDB*

- Built a full-stack e-commerce platform with AI-driven smart search and personalized product discovery, supporting 50+ product listings across a responsive desktop and mobile experience.
- Implemented secure authentication including Google OAuth and JWT tokens, reducing unauthorized access risk with industry-standard session management.
- Designed a responsive frontend using React (Vite), Tailwind CSS, and Context API, backed by a scalable RESTful API with modular Admin, Frontend, and Backend separation.

PROJECT MANAGEMENT APP (Backend) | [GitHub](#) *Node.js, Express.js, MongoDB, JWT*

- Built a production-ready RESTful API backend for a collaborative project management platform supporting project creation, task/subtask tracking, file attachments, and shared notes across multiple user roles.
- Implemented full authentication lifecycle — JWT access/refresh tokens, bcrypt password hashing, Nodemailer email verification, and password reset flow for secure multi-user access.
- Designed a 3-tier RBAC system (Admin, Project Admin, Member) with granular role-specific permissions, enabling structured team collaboration and project lifecycle management.

ACHIEVEMENTS

- Qualified for Smart India Hackathon (SIH) at the college level — selected among top teams in the internal selection round.
- Independently built and deployed multiple full-stack projects covering e-commerce, education analytics, and marketplace platforms — demonstrating end-to-end product development ability.
